

Connecting to The Child Count Uploader

- Your machine will need Java version 6.
 - It works best with update 26
 - This is not an update to Java, it is probably an older version of Java than what you have
 - If you need to go back to version 6 you may need help from your local IT administrator
 - Another option for connecting is finding someone else in your school or organization that has this setup already. In most case the school registrar is a good place to start.

Other Info

- https://wave.ed.state.vt.us:4459/forms/frmserverlet?config=CHILDCOUNT_UPLD
- The uploader will grab both child count export files in your folder C:\ChildCount 2014
- If the upload is successful you will get a message to that effect.
